

# Ice Fossils

1. So, you're an excavator who's looking for forgotten items inside ice fossils. Choose a theme for your excavations and start collecting items to freeze. The items can be anything you can imagine, such as toy animals, flowers, herbs, jewelry, letters, or dinosaurs.
2. In pairs make your fossils. Pour some water inside each cube of the tray, place your items inside the cubes, then put the tray in the freezer.
3. Leave the water to freeze and then remove the tray from the freezer. Swap your item with your partner so you both have new items to discover.
4. After you discover what is inside, create an adventure story, then write it down. Or you could make a fact file on your findings!
5. Note: If your theme was about animals, you can freeze water with the animals inside a balloon to make egg fossils.

**Materials needed:**  
Ice cube tray  
Water  
Items to freeze
