

# Earth's Geology

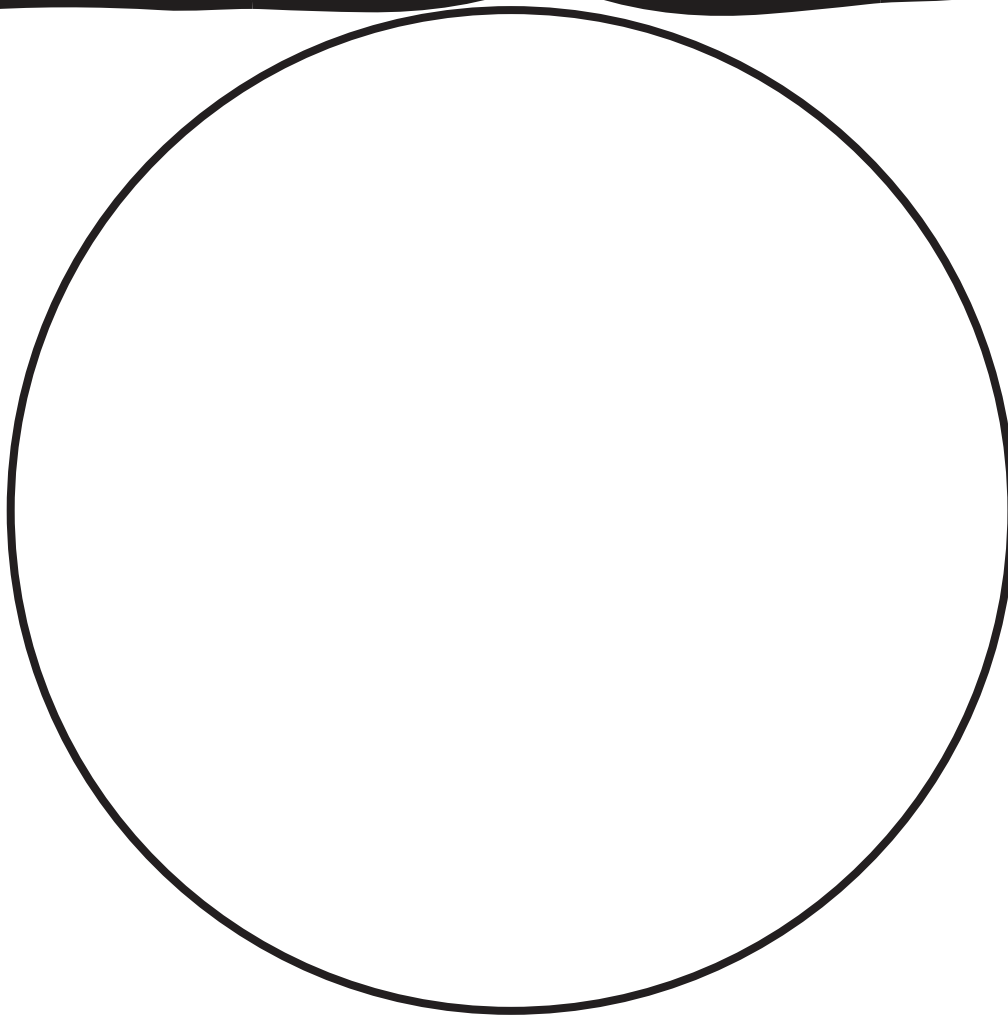

Can you draw and colour the layers of Earth based on the short descriptions below? Don't forget to label them!

## Crust

Earth's thin rocky outer layer where we live.

## Mantle

Thick, slow-moving layer beneath the crust made of hot, flowing rock.

## Outer Core

Molten metal layer around the inner core, creating Earth's magnetic field.

## Inner Core

Solid metal centre of the Earth. It's incredibly hot and under big pressure.
